

FOR IMMEDIATE RELEASE

AFRISAM'S APC A MASTERPIECE OF CEMENT ENGINEERING

AfriSam's All Purpose Cement (APC) is a specially blended, high quality cement engineered for use in structural, building and masonry applications. Perfect for reducing the heat of hydration in mass concrete and for improving concrete's resistance to chemical attack from sulphate, chloride and soft water, the mix makes concrete highly resistant to alkali-aggregate reactions. It is often used to reduce the permeability of concrete in water-retaining structures.

AfriSam's APC complies with the SANS 50197 cement specifications for common cements and is ideal for applications where high early strengths are not of primary importance. The product's long term strengths are generally exceed the requirements of cements in the 32.5 MPa strength class.

The product finds ready use in brick and block making, reservoirs and swimming pools, precast operations, road stabilisation, mining applications, structural concrete, plaster and mortar as well as shotcrete.

AfriSam's APC can be used for producing concrete for unreinforced foundations on single storey dwellings; reinforced foundations and slabs, light-duty house floors, paths, patios, steps, driveways and garage floors as

well as high strength (30 MPa) concrete for applications such as suspended structural beams and slabs, precast items such as flagstones and heavy-duty floors such as workshop floors.

ENDS ... MARCH 2009
